Dear Property Owner/Manager

Your tenant \_\_\_\_\_ has requested our wireless UHF cable service to be installed at \_\_\_\_\_. In order for your tenant to receive our service, an outside UHF antenna will need to be installed on the roof. This may require a tripod, with up to a 10 foot mast, to be attached to the roof to hold the antenna. An alternative installation would be a gable mount with the same mast/antenna installation. If the building is not pre-wired, cable would be run on the outside of the building to the point of the entry.

All installations are done in a professional and workmanlike manner by a fully trained personnel. High Quality sealing pad is used when installing the tripod. Every effort is made to protect your property and to leave the premises as found.

If this proposal meets with your approval and you give your permission for an antenna to be installed, please sign, date at the bottom, and return by fax or mail or email to our office. Please be sure to list your address and phone number under your signature, in case we need to contact you further.

Thank you very much for your consideration. If you have any questions, please call our office at 459-2288.

Rita Steward
